Pedestrian barriers

These barriers contribute to the safety of people at events and along the road.

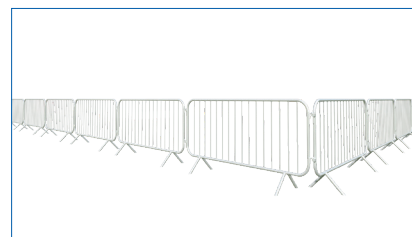

**Fixed Leg Pedestrian Barrier
2.3m**

This lightweight pedestrian barrier is ideal for managing or holding back large groups of people. Whether this means screening dangerous places at the location, clearly identifying first aid stations or providing proper management of people or logistics flows - these crowd control barriers contribute directly to the safety. This barrier is also safe for children and animals because of the narrow bar distance.

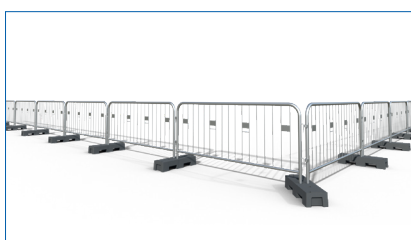

**Fixed Leg Pedestrian Barrier
2.3m (red)**

In areas requiring higher safety and security, it may be convenient to use our red version of the Fixed Leg Pedestrian Barrier. In fact, the red colour makes these barriers stand out particularly well. The fixed leg makes these barriers extra sturdy, making them multi-purpose. Of course, they are ideal for the same purpose as the grey variant: managing (large groups of) people or logistic flows.

**Fixed Leg Pedestrian Barrier
2.3m (white)**

Lining up white crowd control barriers provides a professional finish. Especially when they are combined 50:50 with our red variant, you create a highly visible fencing line. Our Fixed Leg Pedestrian Barrier is ideal for managing busy public areas, such as festivals, marathons, (sport) events and civil projects. But they are also definitely suitable to put along the road to guide traffic.

Bar Pedestrian Barrier 2.3m

Reduce the risk of accidents by protecting visitors and pedestrians with Heras Mobile's crowd control barriers. The Bar Pedestrian Barrier is an extremely robust round top pedestrian barrier and is perfect for pedestrian control at leisure or sport events, as this product can be easily installed. Furthermore, this barrier is ideal for marking out walkways, but also for guiding traffic.

**Mesh Pedestrian Euro Barrier
3.5m**

These barriers have various applications, such as guiding traffic or as a visibility screen on the highway. This fence has the properties and appearance of a construction fence combined with the functionality of a crowd barrier. As a result, this fence can also be used as a pedestrian demarcation when you have a longer fencing run needed.

Do you want to know which crowd control barrier best suits your situation? Contact us.

Pedestrian gates

To create entrances and exits in the crowd control barrier fence line.

Walk Through Pedestrian Barrier 2.3m

This barrier is also available in red. By using the Walk Through Pedestrian Barrier, you create crossing points in long runs of pedestrian barriers (e.g Fixed Leg Pedestrian Barrier). This makes the barrier very user-friendly, as it is easy to grant access to persons.

Gated Walk Through Pedestrian Barrier 2.3m

This barrier is also available in red. As the name suggests, there is a gate in this Walk Through Pedestrian Barrier. This makes it even safer, because you really have an enclosed fence line of crowd control barriers. A very child- and animal-friendly solution!

Plastic barriers

Lightweight and highly visible plastic pedestrian barriers.

Gate Barrier

The Gate Barrier is a safe and easy plastic safety barrier. The barrier is supplied in highly visible orange, but can also be supplied in other colours. This barrier is suitable for keeping (larger groups of) people at a distance and for guiding traffic.

Strongwall Barrier 1m

The Strongwall Barrier is an extremely robust and stable barrier, which is designed to comply with Chapter 8 Street Codes of Practice. Therefore, the Strongwall Barrier is ideal for providing people safe access and guiding traffic in a safe way.
